

# Tackled issues in Tinkoff Etna

1. `Fix order of columns after TSDataset.to_flatten` #873
2. `class AutoBase and AutoAbstract` #1023
3. `set_params` method #1025
4. `class Tune` #1024

Issues [2], [3], [4] are milestones in development of Tinkoff Etna AutoML module. Their completion required engineering and implementing inheritance structure that is both convenient, efficient and logically correct.
